

I grew up with broadcast radio, worked my way through Penn State on air and selling advertising for a local AM station, worked part time while in the Army at an FM station in Norfolk, VA, and never go anywhere in a car without a radio on. XM radio has given me additional pleasure, as it provides me with a breadth of options never before experienced. In particular, I like the ability to instantly obtain weather and traffic conditions in various locations along the East Coast as my family travels in our car. Please consider our desires, as well as those of probably millions of other satisfied XM customers, and reject the NAB's petition 04-160.

Thank you.
